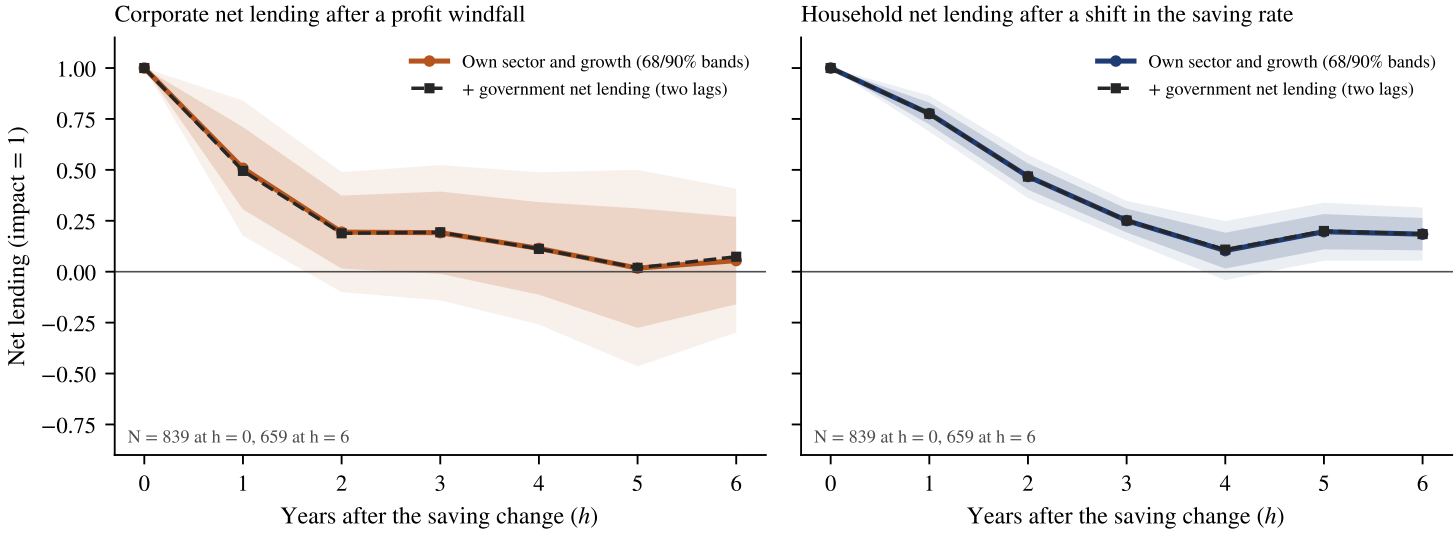
Sample D: Common period (1998–), including start years 2020–24



Notes: 31 economies, start years 1998–2025; every horizon uses all start years with the outcome observed, so the sample shrinks with the horizon. Local projections of each sector's net lending on the profit-windfall (corporations) or saving-rate (households) component and the remaining component, with two lags of the sector's net lending (levels), both components and GDP growth, and country and year fixed effects; two-step weighted least squares. Dashed: adding two lags of government net lending. Normalized by the impact response. Bands: country-cluster delta method. 'Common period': economies already observed in 1998.
