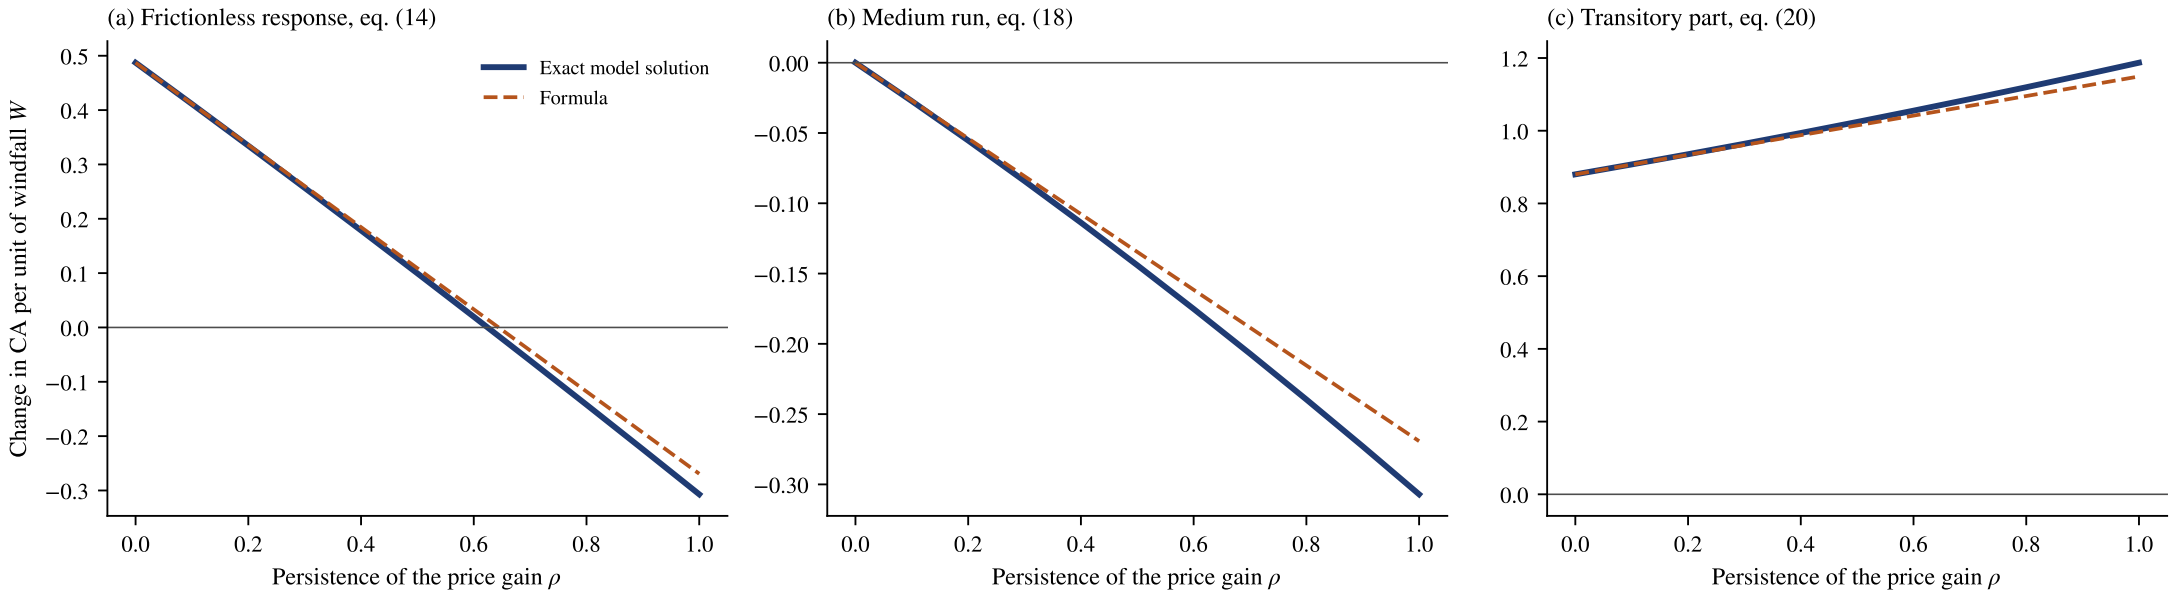
The two-sources formula matches the exact model solution



Notes: Windfall ε = 0.1 (10 percent of export income). Parameters: β = 0.95, R = 1.05, θ = 0.12, investment/income = 0.25 (κ = 0.50), $\bar{I}$ = 0.8 × frictionless investment, so both constraints bind. Formula coefficients: a = 0.487, b = φ_m = -0.269, φ_s = 0.88. Differences are second order in ε.
