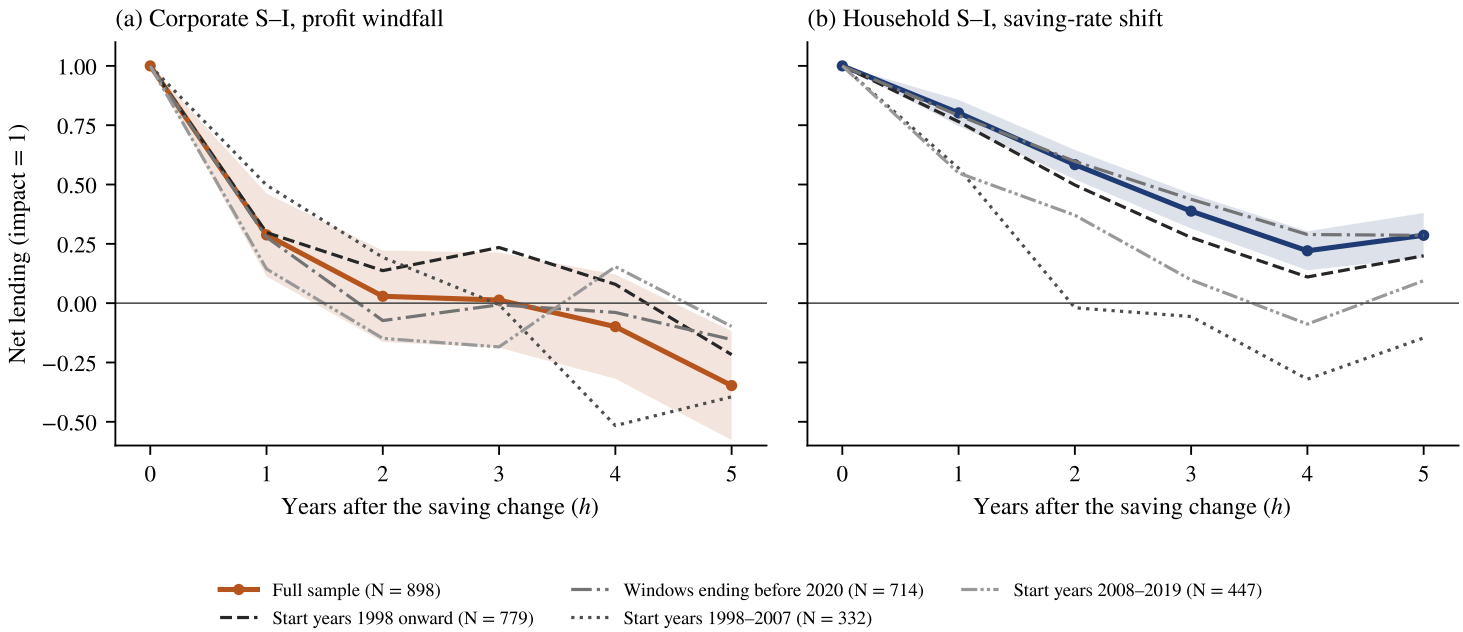
Subsamples



Notes: Baseline specification re-estimated on each subsample (weights re-estimated). Before 1998 only five economies (France, Sweden, the United States, Finland, Korea) report sector accounts. 'Windows ending before 2020': start years up to 2014, so that year t+5 precedes COVID-19. Shaded: 68 percent band for the full sample. Short subsamples have few years per economy, which biases persistence downward when lagged levels and country fixed effects are both included.
