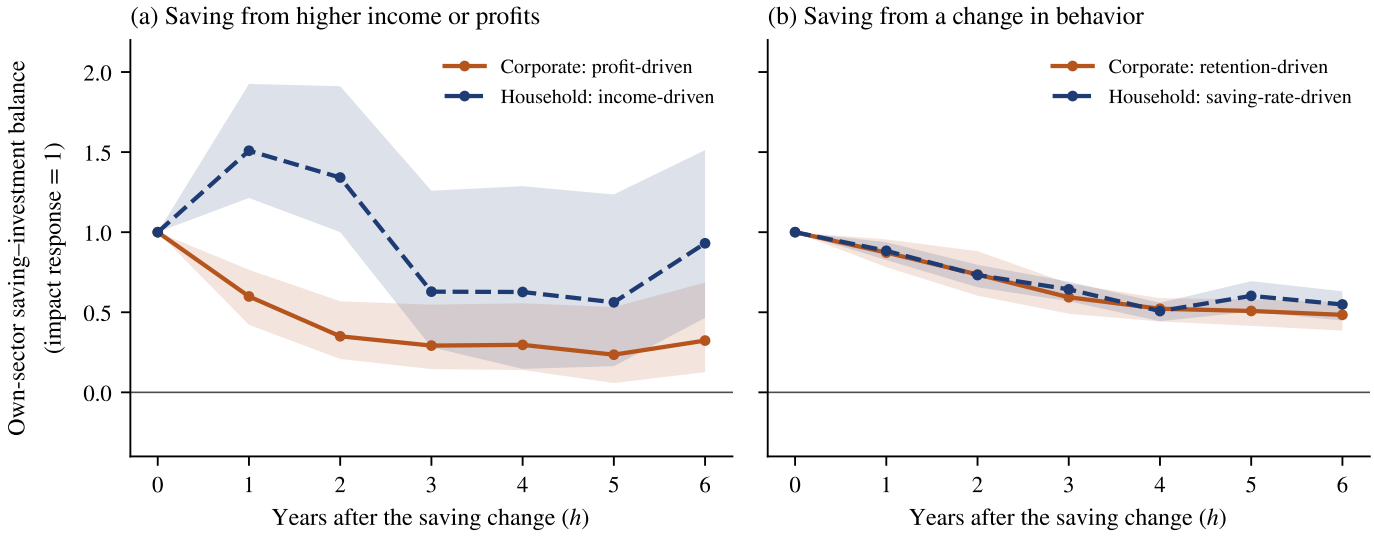
Persistence of sector balances by source of the saving change



Notes: Local projections on the four components of the change in sector saving (N = 871, 38 economies; same country-years at every horizon). Controls: two lags of the four components, GDP growth and the own-sector balance; country and year fixed effects; two-step weighted least squares. Shaded areas are 68 percent bands from a country-cluster bootstrap (499 replications).
