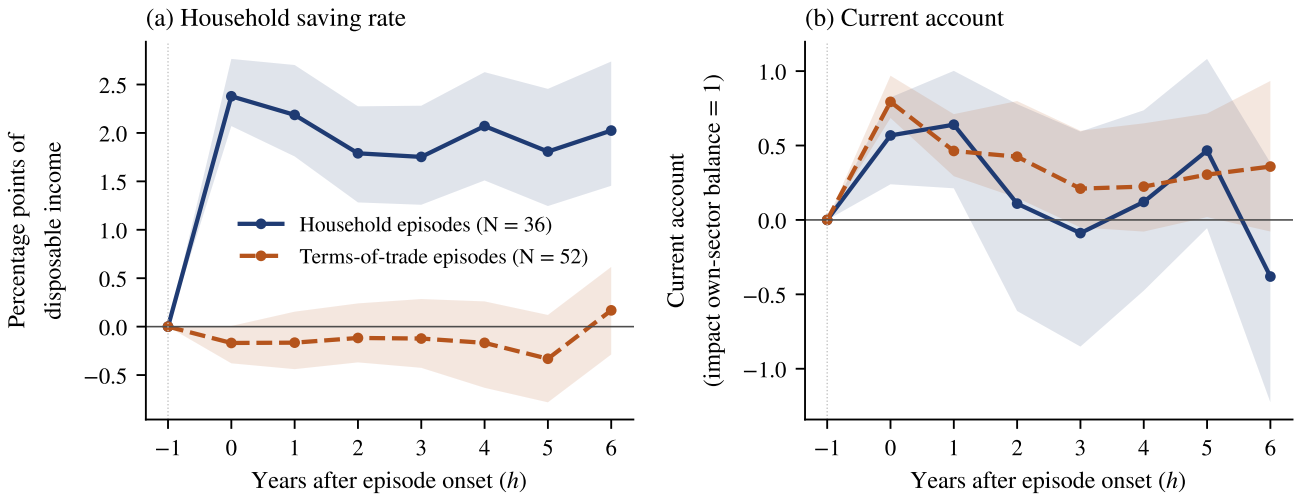
**Figure 3. Household saving rate and current account responses**



Notes: (a) Cumulative change in the household gross saving rate per episode, percentage points of gross disposable income (not normalized). (b) Cumulative response of national net lending (percent of GDP), normalized by the impact response of the originating sector's saving–investment balance. Shaded areas are 68 percent confidence bands (country-cluster bootstrap, 499 replications). Same episodes and estimator as Figure 1.
