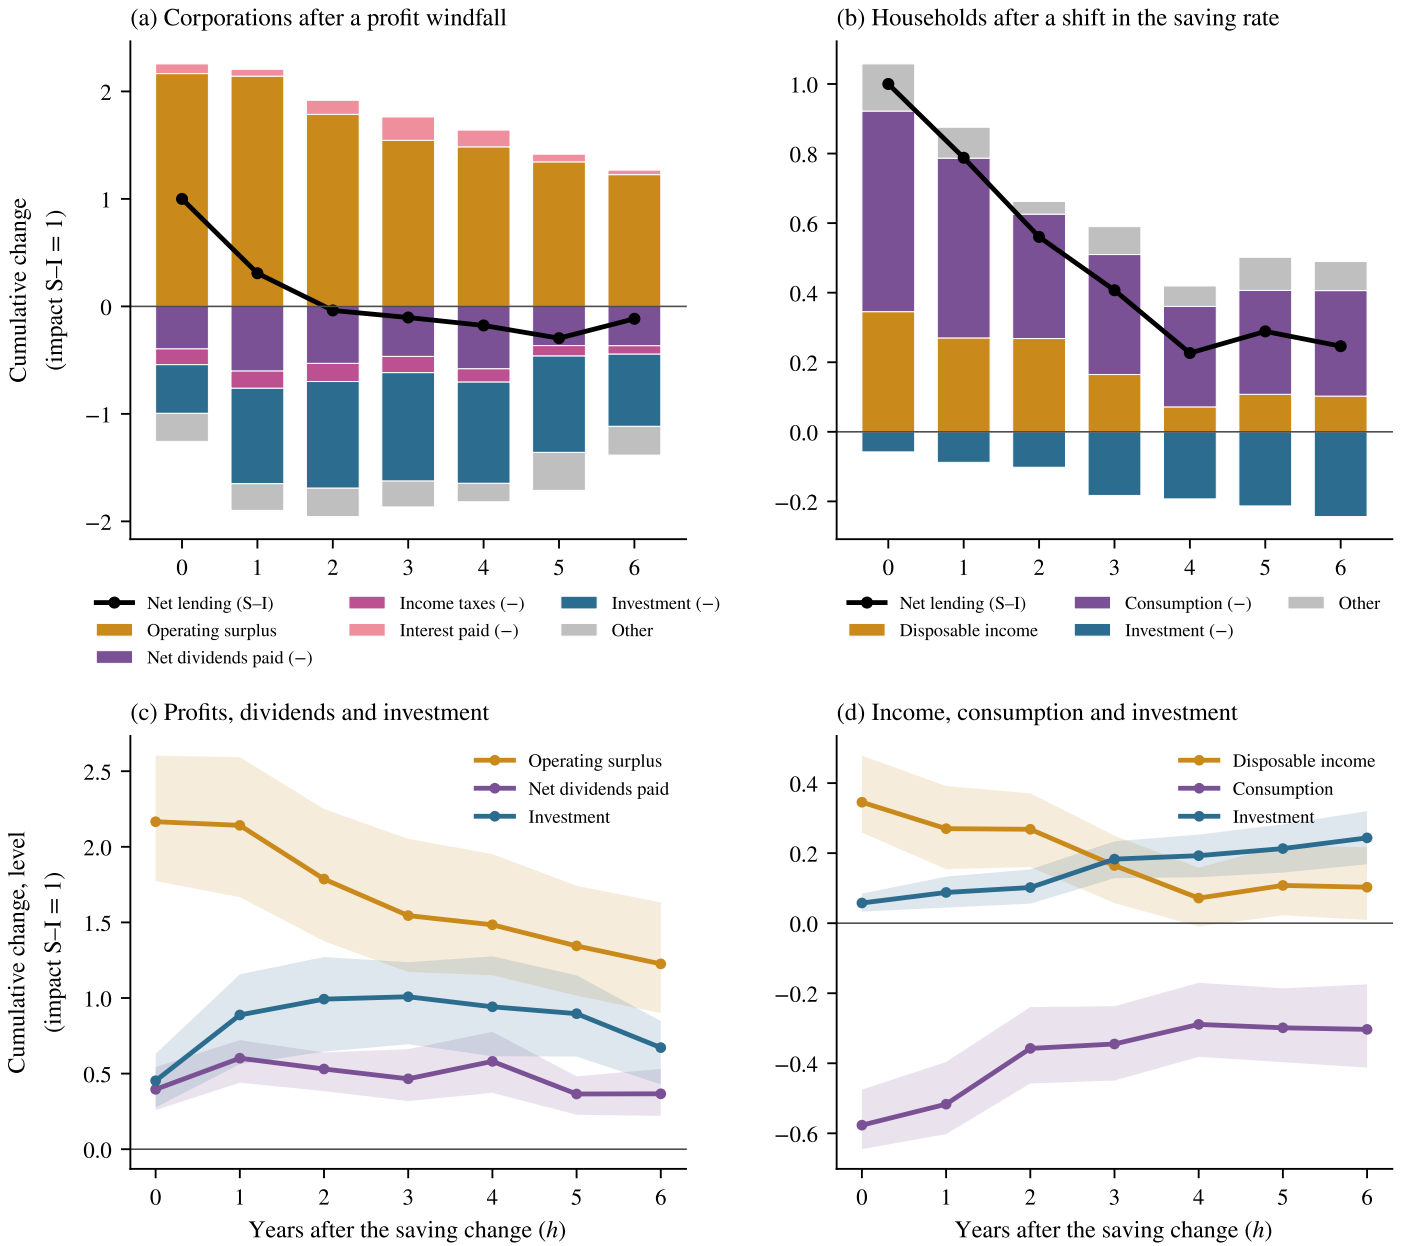
Where the extra saving goes



Notes: Same local projections as the persistence figure, with each item as the outcome (cumulative change from year −1, percent of GDP), scaled by the impact response of the sector's balance. (a)–(b): contributions to net lending, with outlays entered with a negative sign; 'Other' is the remainder (interest and rent received, capital transfers, statistical differences). (c)–(d): levels of selected items with 68 percent country-cluster bootstrap bands.
