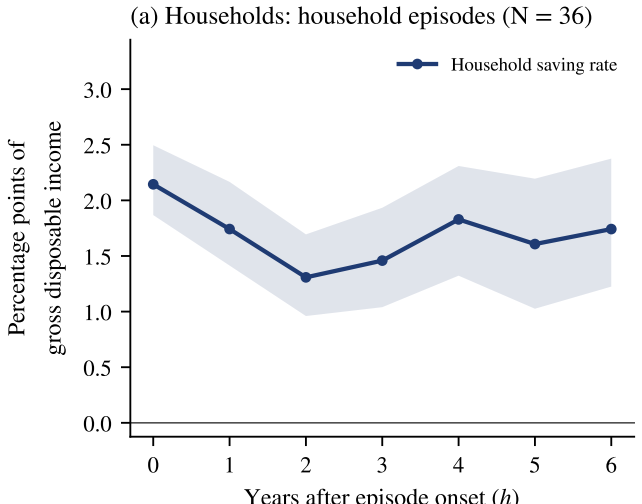
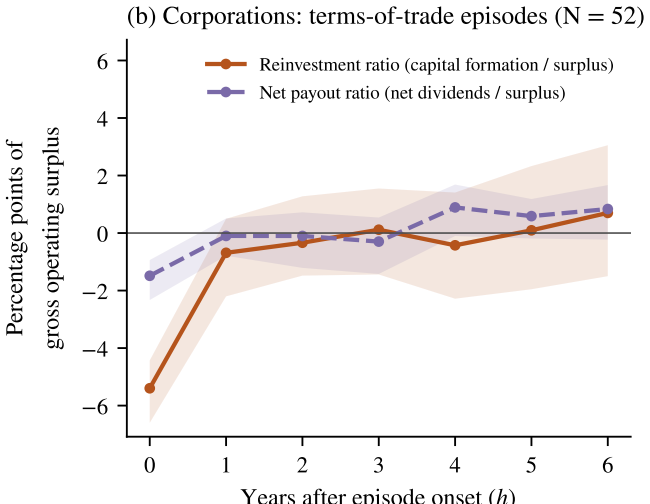
Figure 4. Household saving propensity and corporate spending propensities





Notes: Cumulative change per episode relative to year −1, not normalized. Panel (a): household gross saving over gross disposable income. Panel (b): non-financial corporations' gross capital formation and net dividends paid (paid minus received), each over gross operating surplus. In terms-of-trade episodes the household saving rate changes by between −0.5 and 0.0 percentage points (not shown). Shaded areas are 68 percent confidence bands (country-cluster bootstrap, 499 replications). Same episodes and estimator as Figure 1.
